

[Golf Ball (Corporate Docket PU2081)]

Abstract of Disclosure

A golf ball core composed of a polybutadiene mixture containing zinc diacrylate with a particle size ranging from 3 to 5 microns. The golf ball core is preferably utilized with two-piece golf balls or solid three-piece golf balls. The golf ball core has a higher coefficient of restitution than a conventional core with a similar compression value. Alternatively, the golf ball core has a lower compression value than a conventional core with a similar coefficient of restitution value.
